## **DETAILED ACTION**

### ***Allowable Subject Matter***

1. Claims 9-14 are allowed.
2. The following is an examiner's statement of reasons for allowance:

U. S. Patent No. 5,646,525 to Gilboa in view of U. S. Patent No. 5,307,072 to Jones, Jr. and U. S. Patent No. 4,829,250 to Rotier are references closest to the claimed invention. Gilboa in combination with Jones, Jr. and Rotier disclose a method for determining the position, velocity and acceleration of an object, comprising: providing a three dimensional fixed reference frame of known dimensions; providing an object, the position, velocity and acceleration of which are to be measured; generating electrical current from an oscillator; delivering the current from the oscillator to a power amplifier; directing the amplified current from the amplifier to a plurality of transmitters; generating a magnetic field from a plurality of magnetic field transmitters in the reference frame; receiving the magnetic field signal from the transmitter into at least one receiver; demodulating and amplifying the received magnetic field signal into magnetic field components from the receiver signal in which the output from the amplifier is proportion to the magnetic field components. However, Gilboa in combination with Jones, Jr. and Rotier do not teach applying an extended Kalman filter utilizing a mathematical algorithm to the demodulated and amplified signal to calculate the position, velocity and acceleration of the object; and including all of the other limitations in the respective independent claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue
